Cebu, Philippines | +63 927 585 2893 | lucerocris22@gmail.com | crislucero.surgestudio.tech | github.com/lucerocris

SUMMARY

Full-stack developer who ships production software end to end — from schema and access control through to the interface users touch. Built and launched **Nook**, a cafe-finder app live on the App Store, as a six-service system spanning Flutter, Next.js, and Supabase. Works across TypeScript, PHP, and Laravel.

EXPERIENCE

Platform Maintainer and Tech Lead

July 2026 – Present

PickleRank PH — Cebu, Philippines

- Took over an inherited production **PHP / CodeIgniter 4** platform and maintain it alone — REST API, admin console, and Expo mobile client — across **JWT auth**, **Redis** caching, **Pusher** realtime updates, and AWS S3.
- Lead the tech team on **tournament days**, running live event operations and resolving issues on the spot as matches are played.
- Building **Swiss-system tournament pairing**, extending the ranking engine to a new competition format.

Freelance Web Developer

June 2026 – Present

Independent — Cebu, Philippines

- Sole developer for a retail client's **Shopify storefront**, owning scoping, design, implementation, and deployment.
- Rebuilt landing and product pages for conversion on a **Dawn 15.5** theme, writing custom sections and Liquid components against a documented design spec.

Software Developer

October 2025

Pocket Concerts — Cebu, Philippines

- Only engineer on the concert **registration and check-in system**, which handled **600 registrants**.
- Issued **QR-code tickets by email** on registration, and built the in-browser QR scanner staff used to verify attendees at the door.
- Built on **Next.js**, **TypeScript**, and **Firebase**, with an admin dashboard for roster management; deployed on Vercel.

PROJECTS

Nook — Cafe Finder, live on the App Store

Flutter · Next.js · Supabase

Founder and project lead — 3-person team, 2026 – present · github.com/nook-ph

- Led development of a **six-service product** and wrote most of the code: Flutter mobile app, public web app, internal admin console, cafe-owner portal, and a shared Supabase backend.
- Architected the data layer on **Postgres with Row-Level Security** as the primary authorization boundary, letting the client key be safely public.
- Built owner onboarding with **Mapbox** search and transactional email, then ran launch and outreach directly — **50 cafes listed** to date.

Bijou and Charms — Full-Stack Commerce Platform

Laravel · Next.js · Turborepo

Project lead, 4-person team — self-directed, July 2025 – February 2026

- Led a four-person team and **owned the frontend end to end**: a headless **Turborepo** storefront with a custom drag-and-drop charm configurator.
- Built the **Laravel 12** backend with the team — Sanctum auth, a **Filament** admin panel, S3-backed media, and queued jobs — layered into services, repositories, and policies, with **Pest** tests and Docker.

EDUCATION

University of San Carlos

2024 – 2028 (expected)

BS Computer Science — 3rd year, Cebu, Philippines

- **Dean's Lister**, first year — GWA 1.62 (1.0 is the highest).

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, Dart, Python, SQL
Frontend	Next.js (App Router), React, Flutter, Tailwind CSS, shadcn/ui, Liquid
Backend	Laravel 12, Node.js, CodeIgniter 4, Supabase (Postgres, RLS, Auth), Firebase, REST, Sanctum, JWT
Infra & Tools	Vercel, Docker, Turborepo, Filament, Pest, Redis, Pusher, AWS S3, Git, pnpm, Shopify CLI
